

## WHINT® Interface Management Suite (On-Premise)

Our solution improves the visibility and quality of your interface landscape. It supports increased transparency and better control of your mission critical messaging middleware. Well-designed interfaces need documentation & reporting as well as monitoring & alerting. The middleware add-on for SAP Process Orchestration consists of the following areas which can also be purchased individually:

### Transparency: **Documentation & Reporting**

- > WHINT® Interface Catalog
- > WHINT® Interface Documentation

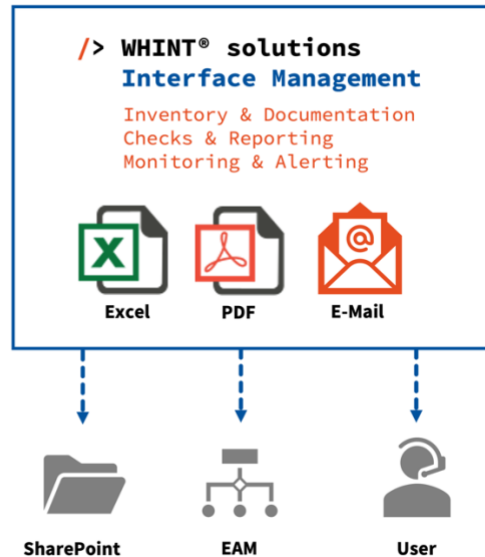

Automatic listing of all interfaces incl. traffic and performance data in Excel as well as generated technical documentation as PDF with Message Mapping documents as Excel attachments.

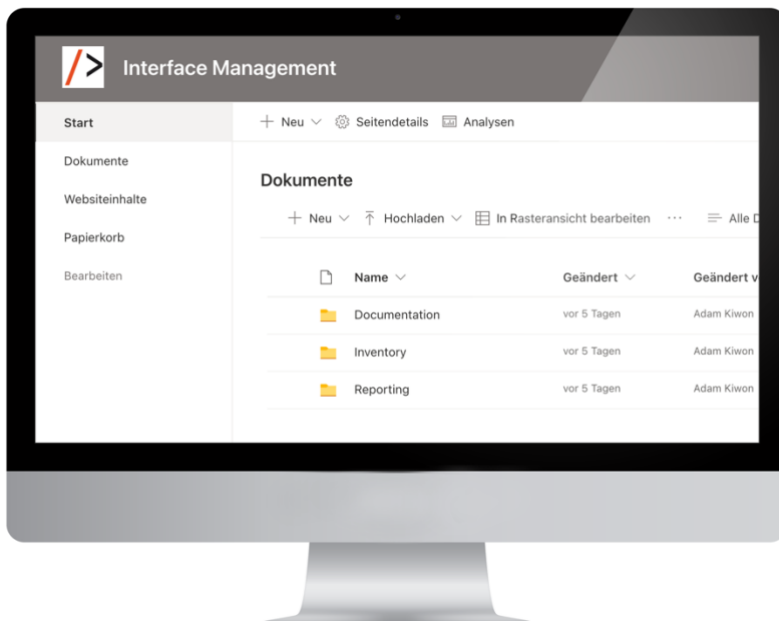

### Control: **Monitoring & Alerting**

- > WHINT® Interface Monitoring

Periodic checks on messages, channels, queues, processes & certificates in error are being aggregated and distributed to different receivers through configurable filters based on Regex rules. Both SAP PO and ABAP Backends are being checked.

WHINT® solutions are deployed as integration content on your standard middleware and require no additional installation or runtime.
